

Company Statement

Mozambique

Skyline Africa Energy & Trading Limited

March 2016

Vision

Fulfill the growing energy needs of Mozambique's existing and future consumers.

Mission

Create self-sustaining, for-profit new energy technology business that address the pressing needs of existing or future **energy consumers** in Mozambique.

Strategy

1. Focus on Mozambique, our current base, as a key market for **energy solution technologies** that can be quickly deployed and widely replicated within the country;
2. **Identify existing or future social upliftment & development programs** which do require a comprehensive energy solution for its materialization, especially in remote rural or semi-urban areas;
3. Engagement: **listen, listen more and listen even more again** to all stakeholders, their views, opinions and real energy needs, since day 1. Be able to put people first;
4. **Sequentially, conceive, develop & implement small-scale energy businesses** by using neglected primary energy sources like crop residues (e.g. rice husk, cotton stalk, cassava residues & woodchips) urban waste, industrial byproducts and solar.
5. Ensure that such Energy Businesses can **operate** the energy solution over the long run, creating additional jobs for the local community members.
